

Link Generator Instructions

Enter the base url for your website. A single slash (“./”) can be used to default to the main page of the website, or a complete url such as <http://www.example.com> can be entered. A single slash is recommended, since Windows 8/8.1/10 has a tendency to return to the exact page on which the pinning action occurred. This value will be used for the Starturl parameter.

Base URL

The favicon is used to provide a site-specific icon within the browser, and for adding favorites/bookmarks for your site. Enter a link (relative, or with the complete http:// address to the favicon.ico file. Since many sites store the favicon.ico in the root folder, simply enter favicon.ico, if that is where your site’s favicon is located.

Subfolder and Filename of Basic Favicon.ico

Enter the Application name. For a website named ‘example.com’, use either **Example** or **Example.com**.

(application-name)

Enter the tooltip text that will appear during mouseover of the Tile.

(msapplication-tooltip)

Paste a relative or complete link to the 144x144 pixel tile to be used for Windows 8 Tiles. (Windows 8.1/10 offers 4 tile sizes in a separate Meta section.)

(msapplication-TileImage) *Windows 8.0*

The Tile Color provides a border color for the Windows 8 tile, along with background for transparent portions of the TileImage. For Windows 8.1/10 tiles, this provides a color for transparent portions of the 4 available tile sizes.

(msapplication-TileColor)

Windows 8.1/10 can use a browserconfig.xml file stored in the root folder, as an alternative to the 4 tile sizes specified in the Meta section. Checking this box will cause the generator to skip creating the next 4 Windows 8.1/10-specific Meta lines.

Use browserconfig.xml file:

Windows 8.1/10 tile images are specified by the fields square70x70logo through square310x310logo. Microsoft provides image information at <https://msdn.microsoft.com/en-us/library/dn455106%28v=vs.85%29.aspx>

(msapplication-square70x70logo)

(msapplication-square150x150logo)

(msapplication-wide310x150logo)

(msapplication-square310x310logo)

Apple images will provide graphics for shortcut links on various device sizes.

144x144

114x114

72x72

57x57

After entering all of the fields listed above, click on 'Generate File'.

A prompt to download the generated text file (meta_headers.txt) will then appear.

The generated lines should be added to the index.php, index.html, or similar default main landing page for your website:

```
<head>
<meta charset="UTF-8"/>
<meta http-equiv="X-UA-Compatible" content="IE=edge"/>
<meta name="robots" content="index, follow"/>
<title>Website Title</title>
<meta http-equiv="Content-Type" content="text/html; charset=iso-8859-1">
<meta name="author" content="Name of Author">
<meta name="description" content="Website Description">
<meta name="keywords" content="Search Keywords">
```

[Paste the generated lines from the meta_headers.txt file, here in your website main page html code.](#)
